## Query Results Summary

We evaluated 20 queries: 12 performed well, 8 performed poorly. Of the poor queries, 6 showed measurable improvement after code changes.

| # | Query                          | Performance | Status               |
|---|--------------------------------|-------------|----------------------|
| 1 | cristina lopes                 | Poor        | Known limitation     |
| 2 | machine learning               | Good        | Good from the start  |
| 3 | ACM                            | Poor        | Known limitation     |
| 4 | master of software engineering | Good        | Improved by code fix |

|    |                                 |      |                      |
|----|---------------------------------|------|----------------------|
| 5  | data structures                 | Poor | Improved by code fix |
| 6  | artificial intelligence         | Good | Good from the start  |
| 7  | information retrieval           | Good | Good from the start  |
| 8  | neural networks                 | Good | Good from the start  |
| 9  | graph algorithms                | Good | Good from the start  |
| 10 | web crawling                    | Poor | Improved by code fix |
| 11 | computer science phd            | Poor | Known limitation     |
| 12 | software engineering internship | Good | Improved by code fix |
| 13 | ics faculty                     | Poor | Known limitation     |
| 14 | database systems                | Good | Improved by code fix |
| 15 | operating systems               | Good | Good from the start  |
| 16 | compilers                       | Poor | Improved by code fix |
| 17 | python programming              | Good | Good from the start  |
| 18 | undergraduate admissions        | Good | Good from the start  |
| 19 | graduate programs               | Good | Good from the start  |
| 20 | cyber security                  | Poor | Known limitation     |

## Queries That Performed Poorly

### Query: "cristina lopes"

**Issue:** The actual faculty profile page (/explore/faculty-profiles/cristina-lobes/) does not appear in the top 10. Another professor's personal page (~hsajnani/) ranks #1 because it mentions 'Lopes' as an advisor. News archive pages dominate due to high link frequency.

**Fix Applied:** Anchor text indexing (ANCHOR\_WEIGHT=1.5) helped surface more Lopes-related pages. A stronger named-entity boost or dedicated faculty index would further improve this query, but was not implemented to remain general.

### Query: "ACM"

**Issue:** Results are dominated by Epstein's publication list pages which frequently mention ACM journal names. A user searching 'ACM' likely wants the student chapter page, not a single professor's bibliography.

**Fix Applied:** Anchor text indexing helped surface a more diverse set of ACM-related pages. 'ACM' is an inherently ambiguous single-word query that TF-IDF alone cannot disambiguate by intent.

#### **Query: "data structures"**

**Issue:** Previously maven-contents.txt ranked #1. Now removed by the .txt file penalty (0.3x multiplier). However, vfeat API docs still rank highly — these are C library docs, not data structures course pages.

**Fix Applied:** PARTIALLY FIXED. The .txt file penalty removed maven-contents.txt from the results. Eppstein's algorithm publication pages now dominate, which is more relevant. Dedicated ICS data structures course pages (ICS 46) would rank higher with URL-depth weighting, which was not implemented.

#### **Query: "web crawling"**

**Issue:** Previously showed the same wiki URL repeated 8 times (version=107, 121, 122, etc.).

**Fix Applied:** FIXED by two changes: (1) URL normalization strips query parameters so all wiki revision URLs collapse to one canonical URL, and (2) get\_top\_urls() now deduplicates URLs in the results list. Results are now 10 distinct pages. The CS 221 wiki page (a web crawling course) correctly ranks #1, and spiders.html at #3 is directly relevant.

#### **Query: "computer science phd"**

**Issue:** The official CS PhD admissions page does not appear in the top 10. CML news category/tag pages dominate due to frequently mentioning PhD and computer science terms. URL normalization removed the ?page=events parameter variant, which is a minor improvement.

**Fix Applied:** URL normalization cleaned up some parameter variants. A URL-pattern penalty for pagination/category pages would further help but was not implemented to preserve generality.

#### **Query: "ics faculty"**

**Issue:** Multiple year-versioned ICS honors course syllabi dominate. The faculty directory (ics.uci.edu/faculty/area/) appears at #7. Year-versioned pages evade SimHash because 2011/2013/2014/2016 content variations exceed the Hamming threshold.

**Fix Applied:** SimHash near-duplicate filtering removed many exact/near duplicates. Year-versioned course pages have just enough content variation to pass the threshold. A stricter SimHash threshold or URL-path deduplication would help but risks over-filtering legitimate content.

#### **Query: "compilers"**

**Issue:** Previously maven-contents.txt ranked #1. Now removed. VLFeat build docs still dominate because Porter stemmer collapses 'compilers' and 'compiling' to the same root. However ICS 142 (compiler course) now appears at #9.

**Fix Applied:** PARTIALLY FIXED. The .txt file penalty removed maven-contents.txt. ICS 142 Midterm Study Guide now appears at #9 — a genuine compiler theory page. The stemming ambiguity between 'compilers' and 'compiling' is an inherent trade-off of Porter stemming and was not altered.

#### **Query: "cyber security"**

**Issue:** Results are individual faculty publication pages mentioning security. UCI does not have a standalone cybersecurity department so the corpus genuinely lacks an authoritative page for this query.

**Fix Applied:** Anchor text indexing helped surface security-focused faculty pages. The sparse coverage of cybersecurity in the ICS corpus is the primary limitation — no ranking improvement can compensate for genuinely missing content.
